

ERTMS: Maintenance Documentation

ERTMS systems/components require clearly worded, easily understood documentation. Interfleet Technology can produce a range of clear, concise maintenance and overhaul instructions for complete ERTMS systems and individual components.

Interfleet maintenance instructions are easy to use:

- All pages can be accessed individually
- Electronic documents with cross-referencing are available
- Documentation is written in plain English
- Illustrations, flow charts and tables are placed in a logical sequence
- A clear format is used in line with client requirements

Documents are designed to allow for (and encourage) clear audit against:

- Instructions and acceptance criteria
- Performance specifications focused on the end result

Acceptance criteria for ERTMS equipment is carefully developed after detailed research and analysis of the equipment and its requirements. Documentation is produced to fit within the profile of each individual client, reflecting their commercial framework.

Interfleet can provide quality ERTMS instructions for both new build and retrofit to existing vehicles. A diverse range of source material is drawn upon to compile maintenance documentation, including manufacturers' data, service bulletins, photos and drawings. The resulting outputs are clear, cohesive, easy to use documents.
